ENERGY**

OUR STORY

In a world where rising energy costs and tightening margins are pressuring businesses, Kuga Energy is leading a revolution. Like the relentless cougar, we've spent years pushing the boundaries of energy innovation, business optimisation and vertical integration to deliver unmatched value to our clients.

Driven by a passion for renewable energy, our team is committed to making a real impact on the businesses we work with everyday. This fierce pursuit of performance and exceptional service has fueled Kuga's growth into one of Australia's largest independently owned commercial energy companies.

With a strong presence across Australia, New Zealand, Philippine's and China, we perfected our value proposition, streamlining every aspect of our operations to deliver powerful results every time.

At Kuga Energy, we go beyond sustainability; we give businesses the power to take control of their energy future, embrace cutting edge technology, reduce costs and reinvest in their growth. Our commitment to energy innovation is a commitment to your success.

That's why, in an era where market volatility is present with rising costs and energy transformation pressures, Kuga Energy ensures your business not only remains competitive but leads the pack.

SITE OVERVIEW

Ettaro Apartments

22/26 Barkly St, Brunswick, VIC 3057, Australia

PROJECT DETAILS

System Configuration	277 kW
Panel Type/Model	Trina 500W N-Type NEG18R.28
Number of Panels	554
Inverter Type/Model	1 x Sungrow 110 kW & 3 x Sungrow Inverter 50kW

PROJECT COST – 277 kW

QUOTATION

Procurement, delivery, installation, commissioning and monitoring of 277 kW Solar for Ettaro Apartments at 22/26 Barkly St, Brunswick, VIC 3057, Australia.

Item description	Total (ex GST)
Solar panels, inverter, wiring, installation	\$442,246
Siteworks	Included
Solar STC Discount	(-\$28,246)
Total	\$418,000

OPTION 2 | FINANCE

Term (years)	5
Monthly payment plan	\$8,718.16

THIS QUOTE IS VALID TILL 07/09/2025

Company Name:

Ettaro Apartments

Company Address:

Ettaro Apartments

Company Address:
22/26 Barkly St, Brunswick, VIC 3057,
Australia

BATTERY LAYOUT & CONNECTION STRATEGY

The 277-kW system will be connected by distributing the inverters across the individual building distribution boards, utilising available spare capacity within each DB. This approach ensures balanced loading and minimises cable runs while maintaining compliance with CitiPower requirements. Similarly, the 150-kW system will be connected by tying each inverter into the relevant building DBs with suitable protection and isolators installed.

For the 50-kW system, the connection will be made directly into the main switchboard (MSB) via a dedicated breaker and lockable isolator, allowing for centralised control and metering.

All connections will be designed and installed in line with industry standards, with verification of maximum demand and fault levels at each point of connection. Export control and metering will be integrated through inverter gateways and CTs, ensuring full compliance with CitiPower's service rules.

This strategy allows for efficient integration of each system size while providing safe operation, clear monitoring, and streamlined utility interface.

CRANE OPERATIONS STRATEGY

We have allowed for crane operations to be carried out above the existing powerlines. A provisional allowance of \$10,000 has been included for CitiPower to undertake a powerline shutdown. However, as the site falls within a No-Go Zone, the final costs and approval must be quoted directly by CitiPower.

During lifting operations, an Energy Safe Victoria (ESV) accredited spotter would need to be present at all times to ensure compliance with safety regulations and maintain exclusion zones if required by CitiPower.

This approach ensures the lift can proceed safely while addressing the regulatory requirements of operating within the No-Go Zone.

Inclusions and Exclusions

Inclusions

Crane Operations – Provision has been made for crane lifts, including allowance for powerline shutdowns with CitiPower (budgeted at \$10,000). ESV-accredited spotter will be engaged during crane operations to comply with No-Go Zone requirements.

System Supply & Installation – Complete supply, installation, and commissioning of the solar PV system, including inverters, panels, and balance of plant.

Electrical Connections – For the 277-kW system, inverters will be connected across the building distribution boards with available capacity. The 150-kW system will follow the same approach, and the 50-kW system will be connected directly into the MSB with dedicated protection.

Compliance – All works carried out to AS/NZS 3000, AS/NZS 4777.1, and CitiPower service and connection standards.

Protection & Metering – Integration of export limiting, anti-islanding, and CT-based monitoring as required by CitiPower.

Documentation & Handover – As-built drawings, compliance certificates, O&M manuals, and commissioning reports will be provided.

Exclusions

Final CitiPower Fees – While an allowance has been included for the powerline shutdown, actual costs will be confirmed and quoted directly by CitiPower.

Civil & Structural Works – Any strengthening or modifications to roofs, structures, or civil works beyond standard solar mounting requirements are excluded.

Asbestos Removal – Any asbestos identification, removal, or remediation is excluded.

Switchboard Upgrades – Major modifications or upgrades to existing MSBs or DBs beyond breaker installation and wiring are excluded unless specifically noted.

Unforeseen Latent Conditions – Any costs associated with hidden site conditions, contaminated materials, or underground services not identified prior to works.

Ongoing Network Charges – Any future costs or charges imposed by CitiPower or other regulatory bodies beyond the initial connection approval.
